LISTING OF THE CLAIMS

1. (Currently Amended) A process for depositing a film onto a bare or unplated zinc or zinc alloy substrate, the process comprising:

directly depositing a film onto a portion of the substrate by physical vapor deposition, the film being a metal film, a ceramic film or a combination thereof,

wherein the metal film includes ehromium, nickel, titanium, zirconium or a combination thereof, and wherein the ceramic film includes a nitride, a carbide, an oxide or a nitroxide of ehromium, nickel, titanium, zirconium, or a combination thereof.

- 2. (Currently Amended) The process of Claim 1 wherein the film is a metal film and the metal film includes chromium, nickel or a combination thereof.
- 3. (Previously Presented) The process of Claim 2 wherein the metal film is deposited at a maximum internal reactor pressure of about 5×10^{-2} torr using a DC voltage ranging from about 25 Volts to about 600 Volts and at deposition rates of about 200 Angstroms to more than 1,000 Angstroms per minute to obtain film thicknesses ranging from about 1,000 Angstroms to about 20,000 Angstroms.
- 4. (Currently Amended) The process of Claim 2, wherein the metal film is deposited at a maximum internal reactor pressure of about 5x10⁻² Torr using a DC voltage ranging from about 40 Volts to about 200 Volts at deposition rates of about 400 Angstroms to more than 500 Angstroms per minute to obtain film thicknesses ranging from about 2,500 Angstroms to about 9,000 Angstroms.
- 5. (Previously Presented) The process of Claim 1 wherein the film is a ceramic film and the ceramic film includes a nitride, a carbide, an oxide or a nitroxide of titanium or zirconium.
- 6. (Previously Presented) The process of Claim 5 wherein the ceramic film is deposited at a maximum internal reactor pressure of about 5×10^{-2} torr using a DC voltage ranging from about

- 25 Volts to about 600 Volts and at deposition rates of about 200 Angstroms to more than 1,000 Angstroms per minute to obtain film thicknesses ranging from about 100 Angstroms to about 20,000 Angstroms.
- 7. (Previously Presented) The process of Claim 5, wherein the ceramic film is deposited at a maximum internal reactor pressure of about 5×10^{-2} Torr using a DC voltage ranging from about 40 Volts to about 200 Volts at deposition rates of about 400 Angstroms to more than 500 Angstroms per minute to obtain film thicknesses ranging from about 2,500 Angstroms to about 9,000 Angstroms.
- 8. (Currently Amended) The process of Claim 1 wherein the film is a ceramic film including a nitride, a carbide, and an oxide or a nitroxide of titanium.
- 9. (Previously Presented) The process of Claim 1 wherein the film is a ceramic film including a nitride, a carbide, an oxide or a nitroxide of zirconium.
- 10. (Previously Presented) The process of Claim 1 wherein the film is a ceramic film including a nitride, a carbide, an oxide or a nitroxide of both titanium and zirconium.
- 11. (Currently Amended) The process of Claim 1 wherein the film is a ceramic film including a nitride of chromium, nickel, titanium or zirconium.
- 12. (Currently Amended) The process of Claim 1 wherein the film is a ceramic film including a carbide of chromium, nickel, titanium or zirconium.
- 13. (Currently Amended) The process of Claim 1 wherein the film is a ceramic film including a nitroxide of chromium, nickel, titanium or zirconium.
- 14-15. (Canceled)

Appl. No. 10/751,305 Office action dated February 15, 2006

- 16. (Previously Presented) The process of Claim 1 wherein the ceramic film has a thickness of from about 1,500 Angstroms to about 20, 000 Angstroms.
- 17. (New) A process for depositing a film onto a bare or unplated zinc or zinc alloy substrate, the process comprising:

directly depositing a film onto a portion of the substrate by physical vapor deposition, the film being a metal film, a ceramic film or a combination thereof,

wherein the metal film includes nickel, titanium, zirconium or a combination thereof, and wherein the ceramic film includes a nitride, an oxide or a nitroxide of chromium, nickel, titanium, zirconium, or a combination thereof.

- 18. (New) The process of Claim 17 wherein the film is a ceramic film including a nitride of chromium.
- 19. (New) The process of Claim 17 wherein the film is a ceramic film including a nitroxide of chromium.
- 20. (New) The process of Claim 17 wherein the film is deposited at a maximum internal reactor pressure of about 5x10⁻² torr using a DC voltage ranging from about 25 Volts to about 600 Volts and at deposition rates of about 200 Angstroms to more than 1,000 Angstroms per minute to obtain film thicknesses ranging from about 1,000 Angstroms to about 20,000 Angstroms.
- 21. (New) The process of Claim 17, wherein the film is deposited at a maximum internal reactor pressure of about 5×10^{-2} Torr using a DC voltage ranging from about 40 Volts to about 200 Volts at deposition rates of about 400 Angstroms to more than 500 Angstroms per minute to obtain film thicknesses ranging from about 2,500 Angstroms to about 9,000 Angstroms.
- 22. (New) The process of Claim 17 wherein the film has a thickness of from about 1,500 Angstroms to about 20, 000 Angstroms.
